Medical care

ABOUT SYSTEM

**This systems speciality is
to find the location of hospital
and treatment / diagnosis
expected according disease**

AVIALABLE SERVICES

Number of treatments :

1. Cardiology
2. Neurology
3. Orthopedic

The Battline between Good and evil
Runs through the **HEART** of every man

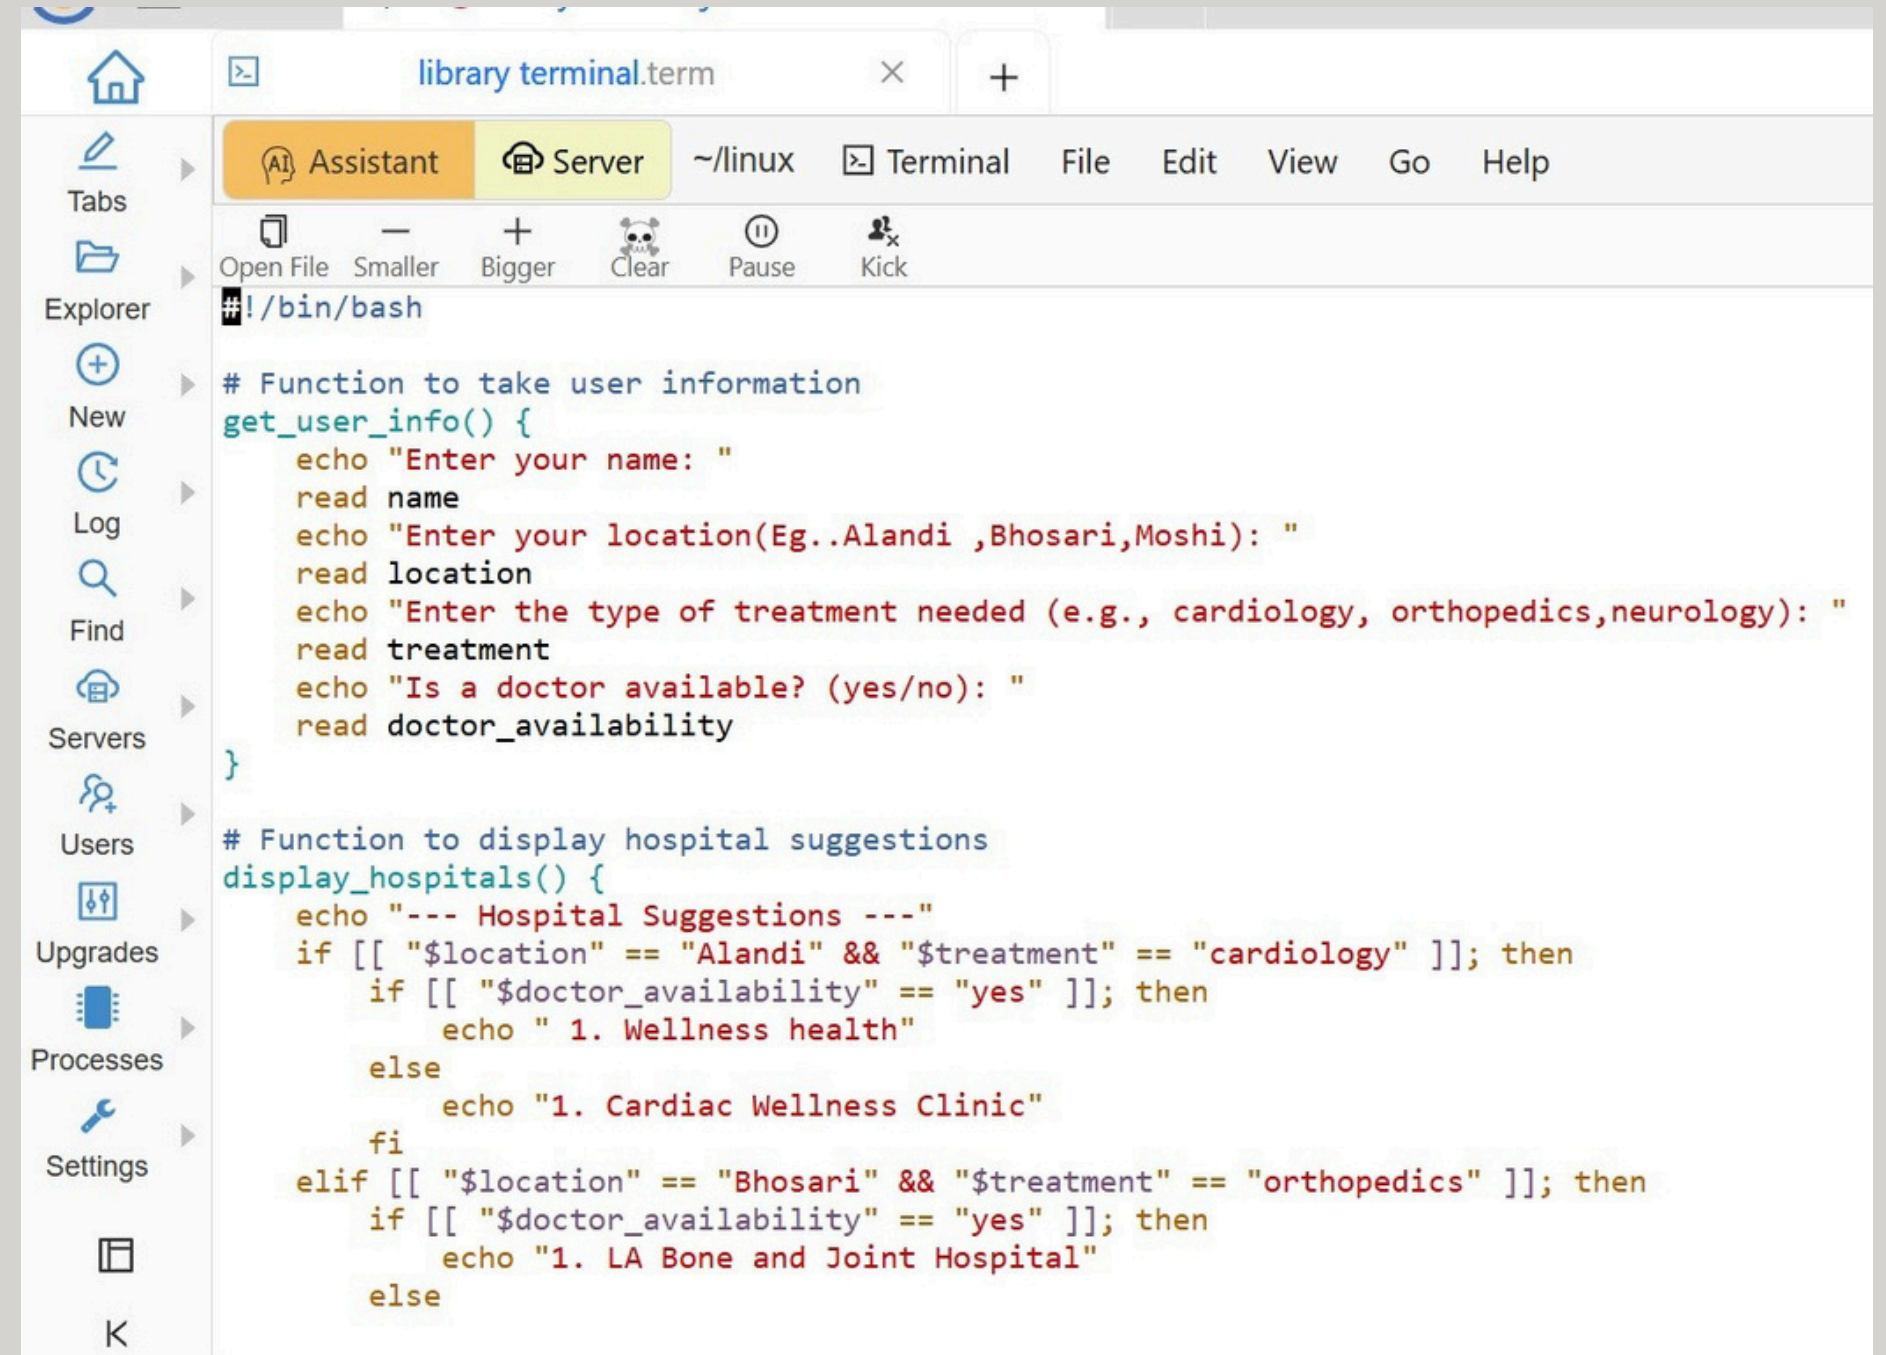

Proper care

INPUT

SHELL SCRIPT

We Have Used funtions for getting person information and hospital information and availability of doctors

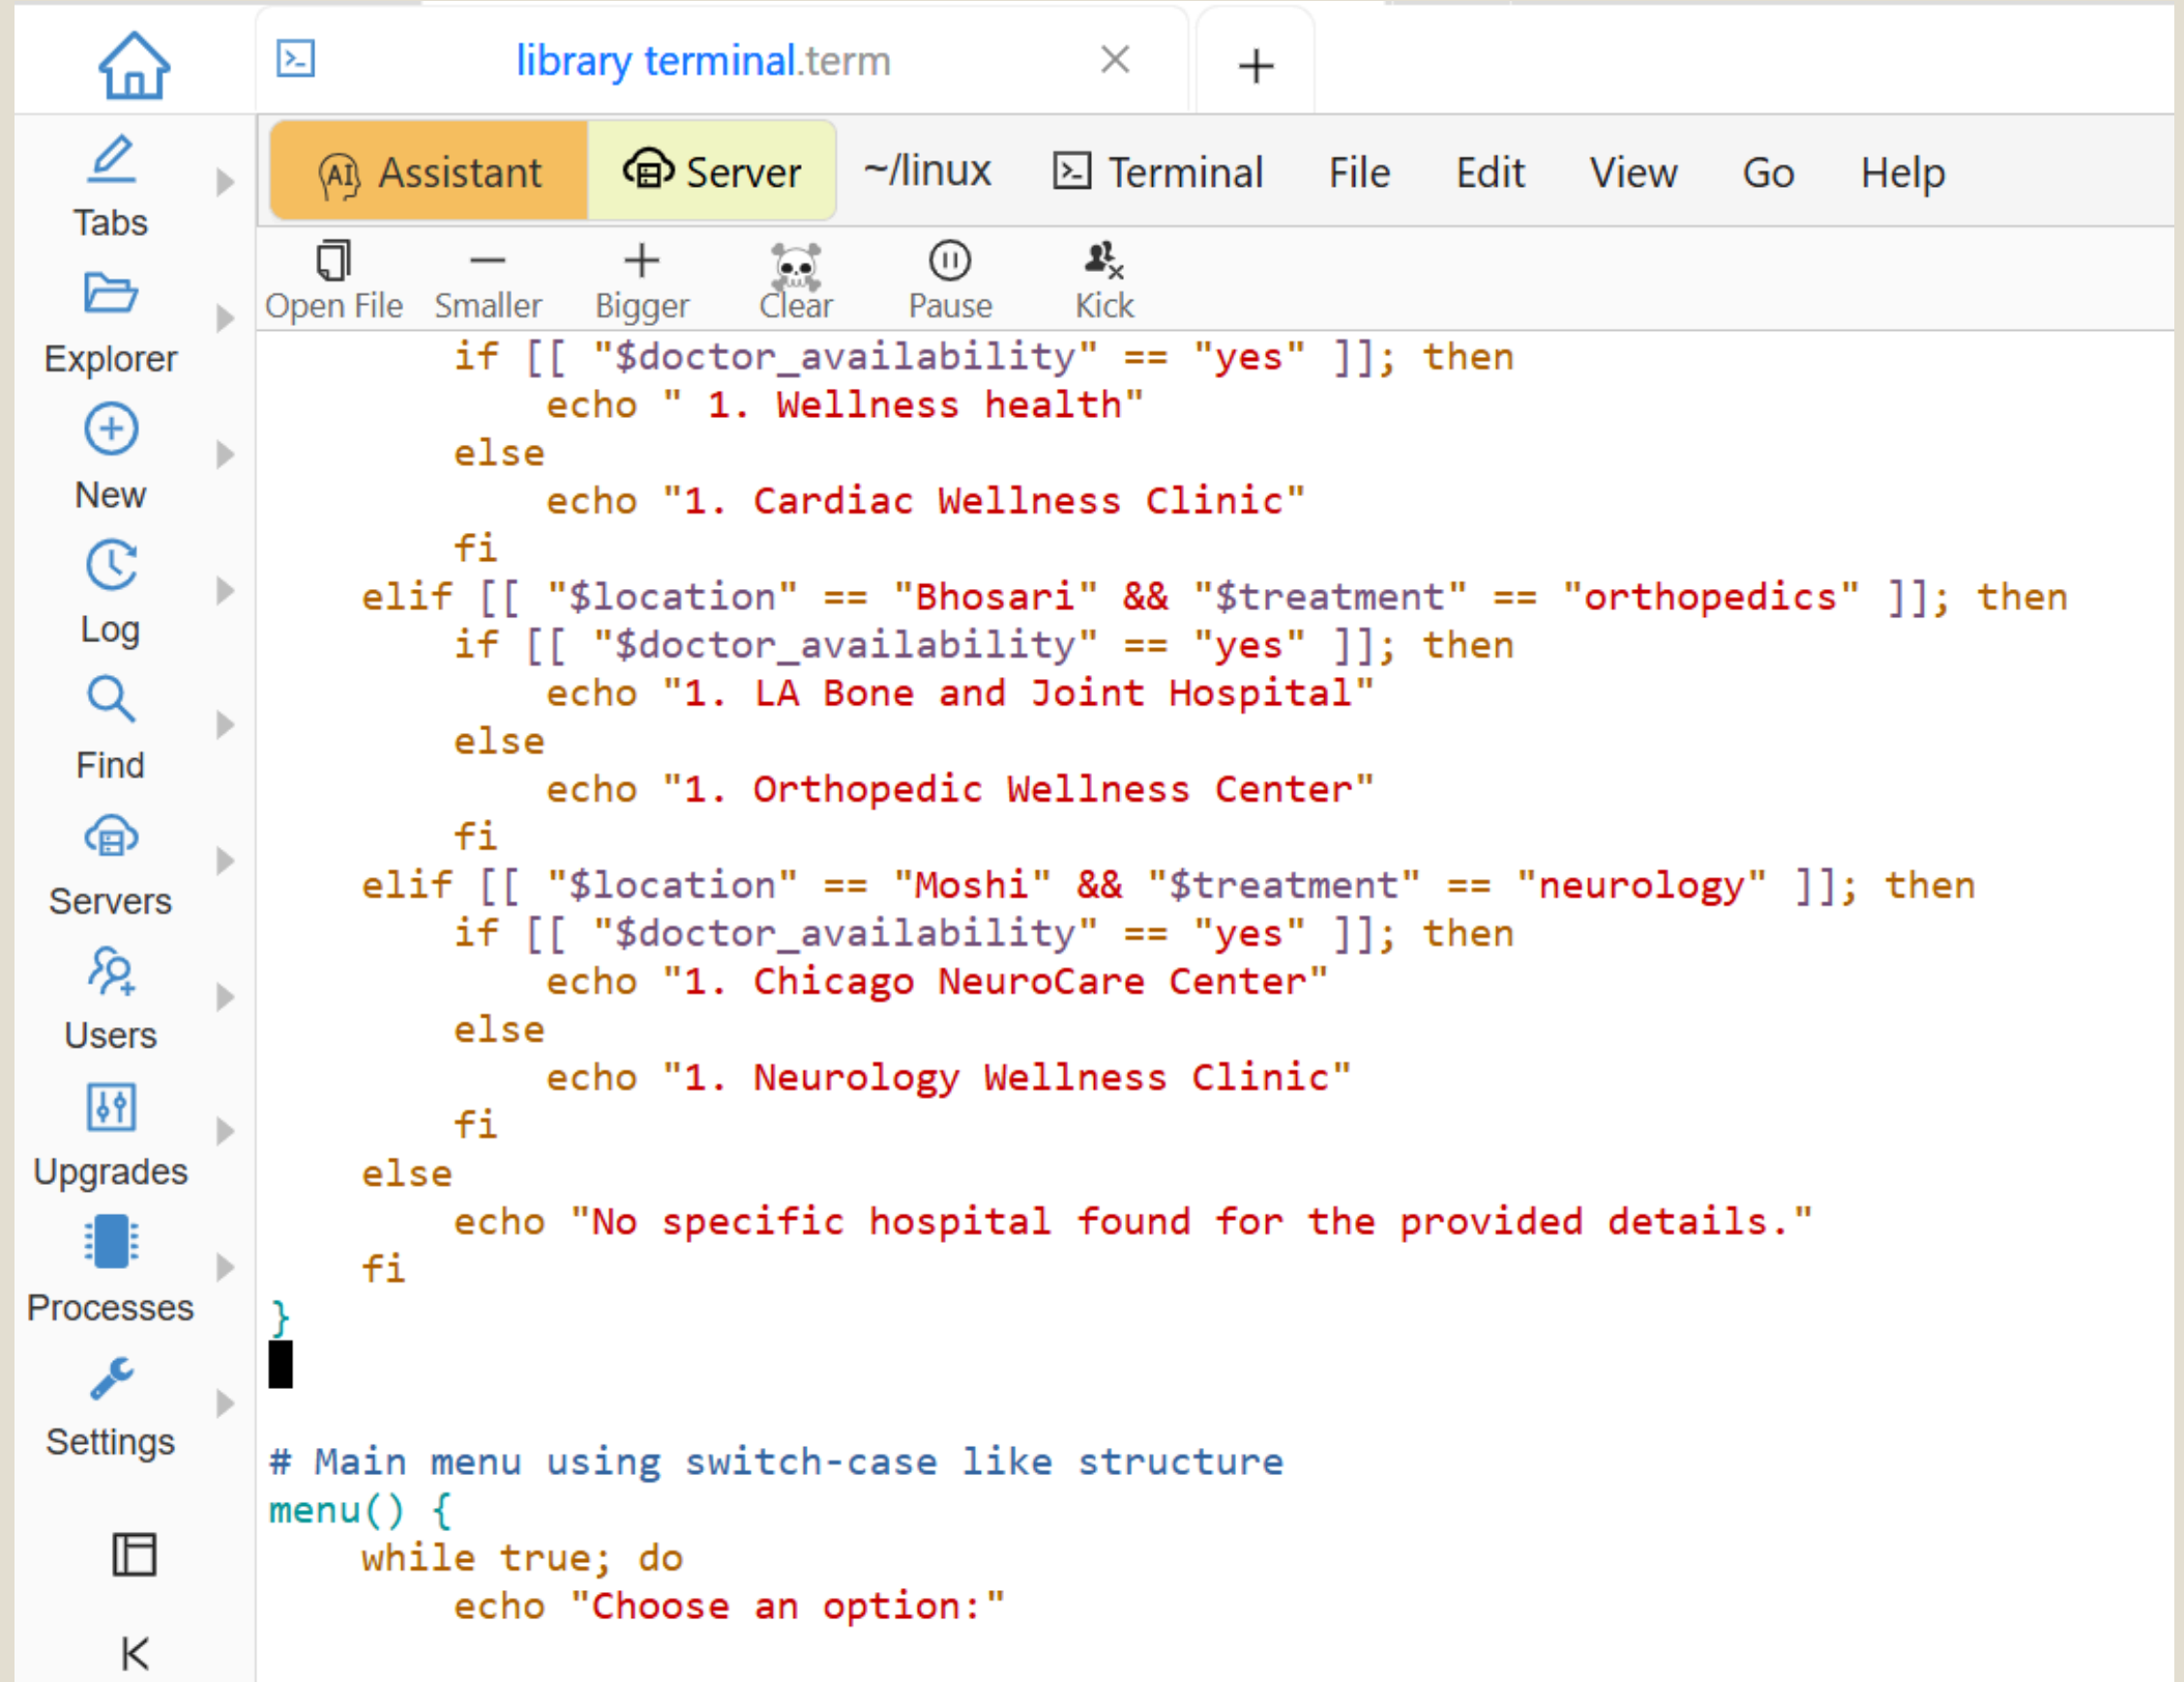

```
library terminal.term
Assistant Server ~/linux Terminal File Edit View Go Help
Open File Smaller Bigger Clear Pause Kick
# ./bin/bash

# Function to take user information
get_user_info() {
    echo "Enter your name: "
    read name
    echo "Enter your location(Eg..Alandi ,Bhosari,Moshi): "
    read location
    echo "Enter the type of treatment needed (e.g., cardiology, orthopedics,neurology): "
    read treatment
    echo "Is a doctor available? (yes/no): "
    read doctor_availability
}

# Function to display hospital suggestions
display_hospitals() {
    echo "--- Hospital Suggestions ---"
    if [[ "$location" == "Alandi" && "$treatment" == "cardiology" ]]; then
        if [[ "$doctor_availability" == "yes" ]]; then
            echo " 1. Wellness health"
        else
            echo "1. Cardiac Wellness Clinic"
        fi
    elif [[ "$location" == "Bhosari" && "$treatment" == "orthopedics" ]]; then
        if [[ "$doctor_availability" == "yes" ]]; then
            echo "1. LA Bone and Joint Hospital"
        else
            echo "1. LA Bone and Joint Hospital"
        fi
    fi
}
```

we have used if else loop
for selecting
hospitals via respective
locations

```
library terminal.terminal
Assistant Server ~/linux Terminal File Edit View Go Help
Open File Smaller Bigger Clear Pause Kick
if [[ "$doctor_availability" == "yes" ]]; then
    echo " 1. Wellness health"
else
    echo "1. Cardiac Wellness Clinic"
fi
elif [[ "$location" == "Bhosari" && "$treatment" == "orthopedics" ]]; then
    if [[ "$doctor_availability" == "yes" ]]; then
        echo "1. LA Bone and Joint Hospital"
    else
        echo "1. Orthopedic Wellness Center"
    fi
elif [[ "$location" == "Moshi" && "$treatment" == "neurology" ]]; then
    if [[ "$doctor_availability" == "yes" ]]; then
        echo "1. Chicago NeuroCare Center"
    else
        echo "1. Neurology Wellness Clinic"
    fi
else
    echo "No specific hospital found for the provided details."
fi
}

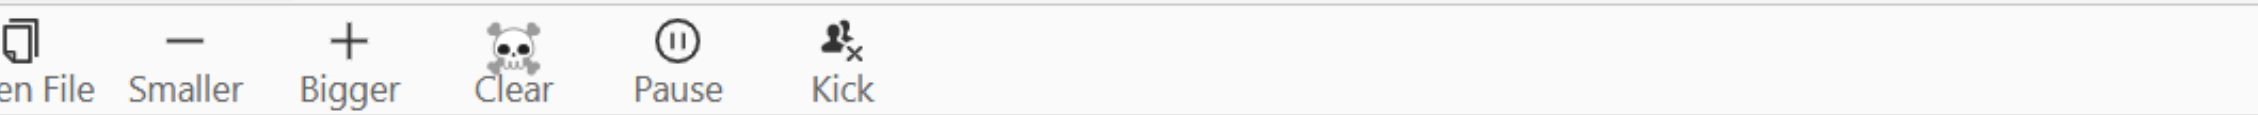

# Main menu using switch-case like structure
menu() {
    while true; do
        echo "Choose an option:"
```

VISION OF SYSTEM

We have created a healthcare system that makes it easier for everyone to get the care they need.

We want to make it simple to book appointments, see your medical records, and get reminders about your health.

Doctors will be able to share information and make better decisions for their patients.

we want to use technology to improve healthcare for everyone.

This version is more straightforward and easy to understand for a wider audience.

We want to help people stay healthier by catching problems early and making sure they get the right care.

USE OF SYSTEM

Healthcare management systems (HMS) are like digital helpers for healthcare providers. They make it easier to manage all the things that need to be done to run a clinic or hospital smoothly.

Health Management : Track your health goals, get reminders for medications, and even find nearby clinics.

ANY QUESTIONS

Thank you !!!
